

## Assignment 4 Checklist

Please fill this in (this is similar to the labs) and include it in your zipped folder. Note this is a quick checklist to help but also double check the requirements in the assignment for full details and requirements.

| DATABASE  | Completed (can add 'yes') |
|---|---------------------------|
| Login Table + Added content to Login Table  | Yes                       |
| Login Table connects accordingly to the Groups Table  | Yes                       |
| Created a Database Dump (whats_happening.sql)   | Yes                       |
| <b>Login Page</b>   |                           |
| Updated to work with database – checks both username and password   | Yes                       |
| Starts a session and sets the session variables   | Yes                       |
| Has a button to create an account (take user to createAccount.php)  | Yes                       |
| Commented Code  | Yes                       |
| <b>Create Account (createAccount.php)</b>   |                           |
| Has a form to create a new account AND group information (e.g., name, and image, etc.)  | Yes                       |
| Checks that the username hasn't been taken  | Yes                       |
| Sets up a new account in the Login table in database  | Yes                       |
| Starts a new session and sets the session variables   | Yes                       |
| Commented Code  | Yes                       |
| <b>Login Dropdown Added in Navigation Bar</b>   |                           |
| Login added to the navigation bar on all pages  | Yes                       |
| When selected – it will stop the current session and take the user to the login page  | Yes                       |
| <b>Events Page+Single-Post Page - Update the two side sliders</b>   |                           |
| Update the 2 side slider bars (based on date - date of event and date the new event is added to the website)  | Yes                       |
| Demonstrates that can load, update, and order events properly from dates from the events table in the database and use sessions   | Yes                       |
| <b>Post</b>   |                           |
| Since using sessions, the group name input is removed from the form – it can use sessions to know the group. Adds the Group Name to the top of the page.  | Yes                       |
| New posts will be added to the appropriate tables in the database   | Yes                       |
| Commented Code  | Yes                       |
| <b>Sessions</b>   |                           |
| When a user logs in, a session is started capturing the needed information to make it look like an interactive session throughout the application (ie. Sessions are included on all pages)                                    | Yes                       |
| The application uses the session data to update the pages with appropriate calls to the databases (e.g., uses unique ID to in the Login table to connect to the appropriate group in the Groups Table, updates the Post page) | Yes                       |
| If a user is not logged in and tries to go to the Post page to add a new event, the site should take a user the Login/createAccount page  | Yes                       |
| Add Logout to navigation bar to (drop-down from login). When the user logs out, clear the session and go back to the login page   | Yes                       |
| <b>Files submitted / Zipped folder</b>  |                           |
| A database dump whats_happening.sql   | Yes                       |
| This checklist (as a doc or pdf) in the Bootstrap Folder  | Yes                       |
| FrameworkDocument (doc, or pdf) in Bootstrap Folder   | Yes                       |
| The Bootstrap Folder with all the updated templates (and images files)  | Yes                       |
| The folder is zipped properly!!   | Yes                       |
| Folder Name of folder is A4   | Yes                       |
| Double checked that didn't zip a shortcut (the folder will be very small if it isn't zipped properly)   | Yes                       |

\*Make sure you have fixed any problems from A3
